
Vehicle Verifications for Auto

Act with confidence when buying, selling or financing vehicles.

✔ Optimise trade margins

Save time on physical inspections and ensure your dealership passes clean deals to financiers – protecting your margins and reputation.

✔ Protect your business from fraud

Be sure vehicles are not stolen or subject to previous financing.

✔ Mitigate vehicle risk

Real-time digital checks confirm the correct make and model and verify authorisation for sale.

Vehicle Verifications validates key vehicle identifiers, enabling you to confidently make sound trade decisions. When combined with other features within TransUnion 1Check, you can access in-depth information about vehicles to prevent the sale, auction, registration, financing and insuring of suspect, invalid or stolen vehicles.

An essential digital tool to combat crime

Auto dealers, asset finance institutions, loss adjusters, auctioneers and the public sector rely on accurate confirmation of specific vehicle identification and verification criteria. TransUnion's Vehicle Verifications uses state-of-the-art technology to provide comprehensive information that assists in sourcing, aggregation, management and dissemination of vehicle data.

When used as part of TransUnion 1Check, you gain instant digital access to extensive motor vehicle identification and verification details to enable more informed, less risky vehicle trading decisions.

Product features:

→ A trusted source of vehicle profile information

Identify and confirm vehicles' primary identifiers, as well as other related financial encumbrances or third-party interest.

→ Real-time police checks

All vehicle enquiries include an automatic referral to the SAPS to confirm a vehicle's current status (this is not a Police Clearance and does not replace one).

→ Robust security alerts to defend against fraud

A 'bolt-on' IT flag registers adverse, ownership or irregular vehicle status, with proactive reporting when activity on a flagged vehicle is detected.

→ Enable legitimate financial registration

Banks and auto lenders can register and confirm legal ownership (titleholder status) and determine any outstanding finance.

Decrease crime, risk and losses through data insight

Vehicle Verifications gives the wider South African motor industry the power to reduce crime, mitigate fraud risk and improve business standards. With access to a wealth of information in our extensive database, our solution is one of four elements offered in ICheck, our easy-to-use digital tool.

Vehicle Verifications:

- Widely used by dealers, asset finance institutions, loss adjusters, auctioneers and the public sector
- Fully supported by the National Association of Automobile Manufacturers South Africa (NAAMSA), the South African Council of Banks and the Retail Motor Industry (RMI)
- A database with daily updates from reputable sources, such as the South African Police Service
- Adherence to highest international standards of data security, accuracy and audit logging

User Features:

- Convenient mobile and web interface
- User-friendly visual tools
- Offline version available if data/connectivity fails
- Also available in printed format on request
