

TU Auto Information Solutions brings you

TU SYNC

The revolutionised vehicle stock control solution

TransUnion AIS and Imarda Technologies SA have partnered to bring you TU SYNC, an innovative vehicle management tool.

It combines the latest in wireless technology and real-time tracking with stock management and full integration into dealer financial systems.

The insurance approved risk mitigation tool provides vehicle activity and live alert notifications, assisting in reaction and decision turnaround times.

With TU SYNC you can proactively manage risk while improving efficiencies, anytime, anywhere.

So now you can have instant visibility and control over your vehicle stock

We're helping you to do more with less.

Automated Stock Control Function

- Automatic confirmation that a vehicle has been delivered to your environment
- Integration with financial systems
- Complete monitoring and reporting from an advanced admin portal anytime, anywhere

Logistics

- Real time confirmation of the delivery cycle
- Remotely track any movement of stock in and out of an allocated area
- No need for new stock fitment as the unit can be reused

Tracking

- Demos
- Fitments
- Unauthorised usage

Why TU SYNC?

Non-intrusive fitment with durable and flexible design

Dedicated geofence enter and exit notifications

Tamper alert notifications

Reusable devices

3 year battery life

And it's a simple fitment process

National fitment centres or onsite team

Devices are fitted within 1.5 hours of new vehicle arrivals and integrated with financial systems.

Each environment is coded with a geofence area...

...and any activity outside of this notifies the nominated team immediately.

THE FUTURE BECKONS
